

PRIYASNEE KEERTI BOOLAKY

Analytics Engineer

London, UK · +44 7395 323 946 · priyasneeboolaky@gmail.com · [LinkedIn](#) · [Portfolio](#)

PROFILE

Analytics Engineer with sole end-to-end ownership of a production data platform built from scratch, spanning ingestion, transformation, financial reporting, observability, and company-wide data enablement. Threw myself into building a 4-layer dbt project (staging through to KPI) three months into my career, with no prior dbt experience, across a multi-source, multi-currency, 44-country distribution operation. Identified and coordinated the recovery of £600K in missed revenue, reduced critical reporting cycles from one month to two days, and trained Finance, Operations, and leadership on the data products I built. Deep expertise in dbt, BigQuery (GCP), Python, SQL, and CI/CD. MSc Data Science with Distinction (Loughborough, 2024). Operates at the intersection of engineering rigour, commercial impact, and data enablement.

EXPERIENCE

Analytics Engineer | Simple Pharma (Tithonia Group)

London, UK · Jun 2025 – Present

A pharmaceutical distribution company operating across 44+ countries. Sole analytics engineer responsible for the entire data platform, from ingestion through to reporting, observability, and company-wide enablement.

- Built and owns a production **4-layer dbt project** (0_staging → 1_central → 2_model → 3_kpi) with **50+ models** across staging, transformation, business logic, and KPI layers, using Jinja macros, incremental models, seeds, and dbt packages (dbt_utils, dbt_fivetran_utils, Xero dbt package)
- Designed and maintains the full ingestion layer: Fivetran connectors for Xero (multi-tenant), Zoho Desk, Absorb LMS, and GitHub; custom Python connector for dbnomics live FX exchange rates; and direct PostgreSQL ingestion from Control Centre — all landing in **BigQuery (GCP)** across dev and prod environments provisioned with **Terraform** (GCP IAM, service accounts)
- Maintains **CI/CD pipelines via GitHub Actions** across dev and prod BigQuery environments, with automated dbt test runs, model builds, and failure alerting on every push; enforces code quality via SQLFluff
- Identified **£600K in missed revenue** through forensic reconciliation of order-vs-invoice discrepancies; diagnosed and fixed the underlying invoicing bug (triggered via PostgreSQL), reconciled all historical discrepancies, coordinated cross-functionally with Finance and Operations to recover outstanding amounts from clients, and implemented a monthly governance process to prevent recurrence
- Reduced Tamrisa's inventory and sales reporting cycle from **1 month to 2–3 days** and inventory reconciliation to **1–2 days** by automating end-to-end reporting via dbt models feeding Power Query-connected Excel reports refreshing directly from BigQuery
- Built the company's full financial reporting suite: sales out, COGS, batch-level P&L, AR/AP ageing, cash flow, inventory movements, budget vs actuals, sales forecasting, and automated AR reporting by entity (Androlabs, Tamrisa, Platform) — giving Finance real-time visibility into receivables for the first time
- Built **10+ data quality and observability dashboards** in Rill, Hex, and Windmill actively used by Finance and Operations, monitoring data freshness, duplicate detection, and missing entries; authored a technical guide for the data team and a user guide for the wider business
- Delivered data enablement training across the business: Finance (sales out vs bookings reconciliation dashboards), budget holders (budget reporting), and a company-wide architecture session; Zoho Desk dashboards and alerts for Operations, GitHub issues tracking for engineering and QMS, and Absorb LMS learning analytics
- Fixed and maintained the Azure Function pipeline processing distributor reports from an automated mailbox into PostgreSQL; contributed to Control Centre (in-house platform) through bug fixes, new pages, and data input features using XState for workflow logic

Data & Systems Analyst | Switch Up (Non-Profit)

Nottingham, UK · Mar 2025 – Jun 2025

A youth development charity supporting young people through mentorship, education, and sport.

- Led BI reporting across 4 departments; built interactive Power BI dashboards consolidating programme metrics for leadership decision-making
- Automated data processing workflows and managed CRM data pipelines, reducing manual effort and ensuring data integrity

Data Analyst Intern | Rogers Capital

Port Louis, Mauritius · Jan 2023 – Mar 2023

A leading financial services firm in Mauritius specialising in fintech, investment solutions, and digital transformation.

- Created Power BI reports for executive decision-making and regulatory compliance; developed an automated report-distribution system using MS SQL

Business Analyst Intern | Rogers Capital

Port Louis, Mauritius · Jan 2022 – Mar 2022

- Provided operational support for the digitalisation of HR systems; defined system requirements and developed a test plan for HRIS functionality

EDUCATION

MSc Data Science — Distinction (73%)

Oct 2023 – Dec 2024

Loughborough University, UK

Key modules: Data Governance & Ethics (87%) · AI & Applied Machine Learning (86%) · Big Data Analytics & Visualisation · Research Methods · Data Mining

BSc Business Information Technology & Systems — GPA 3.75/4.00

Jul 2020 – Jul 2023

Curtin University, Australia

Challenger Trophy: 1st in cohort · Led 5-person team building an intelligent grouping system (K-Means, RESTful APIs, database architecture)

A-Levels: Chemistry, Biology, Literature in English

Jan 2012 – Nov 2019

Loreto College Quatre Bornes, Mauritius

TECHNICAL SKILLS

Languages	SQL (advanced: complex joins, window functions, CTEs), Python (pandas, NumPy, scikit-learn, custom connectors), R, JavaScript, C#
dbt	4-layer modelling (staging → central → model → KPI), Jinja macros, incremental models, seeds, dbt_utils, dbt_fivetran_utils, Xero package, testing, documentation
Data Stack	BigQuery (GCP), Fivetran, PostgreSQL, Supabase, MS SQL Server, dbnomics (FX rates)
Cloud & Infra	GCP, Azure (Azure Functions), Terraform (GCP IAM, service accounts), Docker, Git, CI/CD (GitHub Actions), SQLFluff, Claude Code
BI & Reporting	Rill, Hex, Windmill, Power BI (DAX), Tableau (academic), Excel (Power Query → BigQuery)
ML & Analytics	Classification, clustering, feature engineering, forecasting, Monte Carlo simulation, reconciliation, variance analysis, data observability
Spoken	English (fluent), French (fluent)

SELECTED PROJECTS

Master's Thesis: Applied ML (Random Forest, Gradient Boosting) to **600K+ PISA 2022 records**, modelling cultural determinants of emotional intelligence and academic outcomes across 80 countries

Stock Portfolio Simulator (Excel): Monte Carlo simulations modelling investment risk and optimising asset allocation; automated trend analysis

Intelligent Student Grouping System (Curtin University): Led 5-person team; K-Means clustering, RESTful API design, and scalable database architecture

VOLUNTEERING & INTERESTS

Sri Sathya Sai International Organisation, Mauritius: Ongoing volunteer supporting community outreach, food distribution, and care for children and elderly residents

Interests: Formula 1 (race strategy & telemetry data) · Music & DJing · Classical dance · Karate (competitive) · Distance running (10K events)
